ISIL - International Standard Identifier for Libraries and Related Organisations

Title	ISIL (International Standard Identifier for Libraries and Related Organizations)
Creator	International Organization for Standardization (ISO)
Publisher	International Organization for Standardization (ISO), ISIL Registration Authority (maintainer)
Date	2009
Identifier	ISO 15511:2011
Rights	Open Standard
Description	An alphanumeric string of up to 16 characters.
Subject	Persistent identifier (organisation)
Relation	http://biblstandard.dk/isil/

„Communication and resource sharing among libraries and related organizations, including archives, museums, government agencies, educational institutions and businesses, have dramatically increased. This new collaboration has created a need for a structured, standard identifier for organizations, especially libraries.“ (Introduction of ISO 15511 [2])

What is ISIL?

ISIL is an abbreviation for "International Standard Identifier for Libraries and Related Organizations" and it corresponds to International Standard ISO 15511, which came into force in September 2003.

This code is designed to identify libraries, archives, museums and other related institutions, for preventing misunderstandings, which could arise from change of institution names or from different language variants of the name, as well as for creation a worldwide standard for facilitating of communication and interaction between all participants in this field.

Evolution of ISIL

When the standard was proposed, a prime objective was to facilitate access to library catalogues. Also it was supposed to be used by agencies connecting with library business, such as suppliers and publishers for identifying their library customers.

After launch in course of time ISIL was expanded over other cultural institutions: museums, archives, etc.

Nowadays it is still considered as limited, and Danish National Library Authority, which hosts the International ISIL centre, has made it clear that any organization, which participate directly or indirectly in international library or book trade communication, could obtain ISIL if it has a valid reason and need for it. An ISIL is not intended to be used to classify organizations or their services and holdings.

How the ISIL is constructed?

The ISIL is a variable length identifier. It has a maximum of 16 characters and consists of two parts, separated by a hyphen-minus:

- a prefix (either a two character country code (ISO 3166-1) or a non-country code, registered at a global level);
- a library identifier (assigned by the national ISIL centres).

Each ISIL identifier must be unique. The permitted characters are: Arabic numerals 0 to 9, unmodified letters from the basic Latin alphabet and the special marks solidus (/), hyphen-minus (-) and colon (:).

Due to the fact that organizational identifiers are already widely used in many countries, this International Standard utilizes a flexible structure that can accommodate existing identifiers and be used to create new identifiers. Globally, therefore, the code have to be treated as unstructured. As a result, there is no common catalog of all identifiers, each list is retained and updated only by local center.

Examples

Examples of particular cases:

- United States Library of Congress Washington - US-DLC
- Deutsch-Amerikanisches Institut Bibliothek - DE-Tue120

Examples of ISIL assignments within different countries:

- The valid 6-digits Danish library number is now an ISIL with the preceding country code "DK-" as an international library code [8];
- ISILs assigned to libraries by the British Library are based on MARC organisation codes which are made globally unique by the addition of a country code prefix [10].

Example of general list of ISILs within one national ISIL centre [13]:

In Switzerland all institutions registered in the address database LibRO, automatically received an ISIL. In the LibRO database section relating to the ISIL Register can be:

- Institutions which participate in interlibrary loan (ILL);
- bodies whose individual and family archival collections (fonds) are indicated in the Index of manuscript collections held in libraries and archives in Switzerland;
- all institutions which were specified in the listing Information Schweiz;
- other bodies which correspond to the regulations for ISIL assignment.

Archive plan search

-  HelveticArchives - Archivdatenbank der Schweizerischen Nationalbibliothek NB (2008)
 -  CDN Centre Dürrenmatt Neuchâtel (2000-)
 -  GS- Graphische Sammlung GS / EAD (1886-)
 -  SLA Schweizerisches Literaturarchiv (1991-)
 -  Biokat Biografischer Katalog = Catalogue biographique (1930-2012)
 -  ISplus Gesamt-Adressverzeichnis der Archive, Bibliotheken und Museen, inklusive
 -  AG Aargau
 -  AI Appenzell Innerrhoden
 -  AR Appenzell Ausserrhoden
 -  BE Bern
 -  BL Basel-Landschaft
 -  BS Basel-Stadt
 -  FR Freiburg
 -  **GE Gené**
 -  Académie internationale de l'environnement (AIE) Bibliothèque
 -  Alliance universelle des unions chrétiennes de jeunes gens Bibliothèque (1
 -  American Library (1930-)
 -  Archives d'architecture de l'Université de Genève (1830-)
 -  Archives de la Société religieuse des Amis en Suisse (quakers) (1914-)
 -  Archives de la Ville de Genève (AVG) (1986-)
 -  Archives de l'Université de Genève (1973-)
 -  Archives d'Etat de Genève (1371-)
 -  Archives Dufour
 -  Archives Institut Jean-Jacques Rousseau (AIJRR)

Titel / Name:	American Library
Adresse	
Strasse, Nr.:	Rue de Monthoux 3
PLZ:	1201
Ort:	Genève
Telefon:	+41 22 732 80 97
Identifikation	
ISIL:	CH-001139-2
Bestände und Benutzung	
Entstehungszeitraum:	from 1930
Bestandsbeschreibung:	Romans,documentaires,ouvrages de référence tout en langue anglaise: Englische Sprache und Literatur
Bibliothekarische Bestände:	20'000 volumes
Archivalienbestände:	250 cassettes sonores en langue anglaise

National ISIL centres

If an organization fulfills the conditions for obtaining of ISIL, it can request to be registered by the local ISIL Centre. For this purpose will be enough to send an e-mail, a fax or a letter with the address of the institution to the address indicated under contacts.

Nowadays there are 25 national centres in different countries. They are registered by the ISIL Registration Authority and responsible for assignment of identifiers and maintenance of the codes within their countries.

Every year there are several new centers, but the system still needs wider distribution.

On this web-page you could find an up-to-date list of national centres:

ISIL and other standards

The International Standard Collection Identifier (ISCI) is a new standard for identifying the collections, fonds, and series of libraries.

It consists of three parts: ISIL, delimiting character (colon) and the actual (colon-less) collection identifier for describing the collection within the institution.

Examples:

- FI-H:Slavica (Slavic collection in HUL);
- FR-751041001:Casadesus1 (Bibliothèque nationale de France, Département des Arts du spectacle, Fonds Christian Casadesus, Archives de la Compagnie du Regain et du Théâtre de l'Ambigu), where <FR-751041001> is the ISIL of Département des Arts du spectacle de la BnF , <Casadesus1> is the internal identifier of the fonds [14].

The ISCI is based on ISIL standard in order to allow decentralization of the ISCI assignment and creation of Internet-wide resolution service without a global ISCI DB, thus each organization can assign its own ISCI.

Example of ISIL utilization

RFID tags system is used by libraries to provide identification for check-out, check-in, taking inventory, and for protection against theft.

This system uses a globally unique identifier for every item, which is composed of the combination of owner library/institution and Item ID (according to part 1 of ISO 28560).

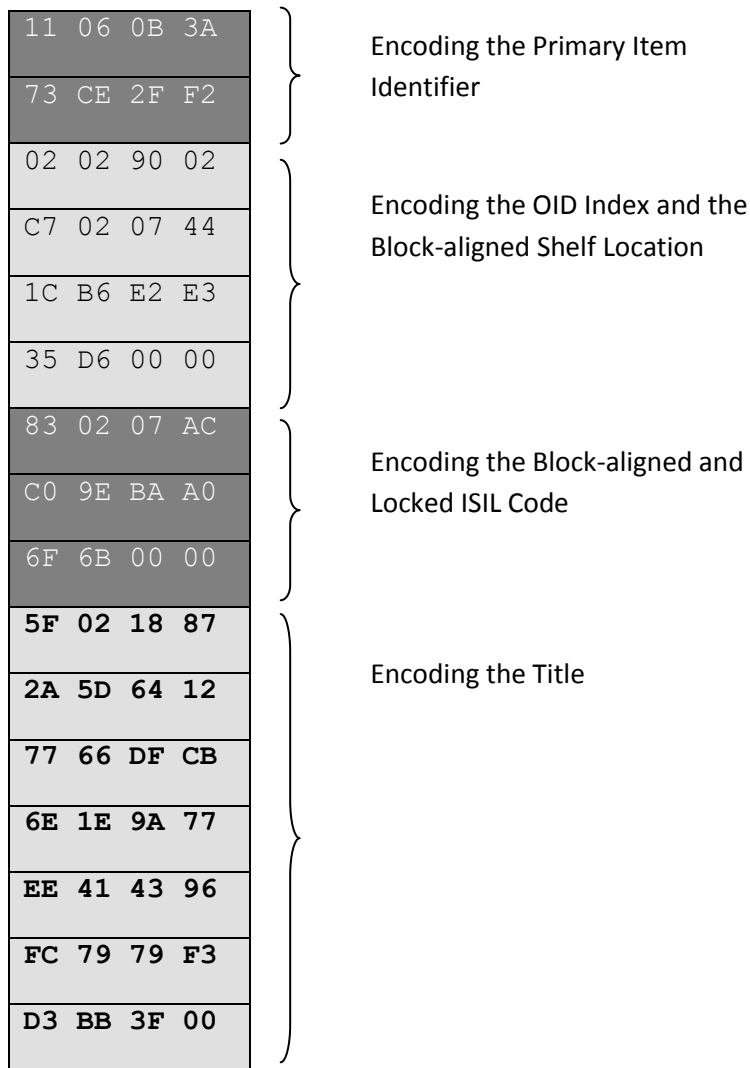

Therefore, if a library plans to implement RFID tagging project, it should obtain ISIL previously.

Encoding the ISIL Code in RFID:

One of the ISIL code advantages is, that it facilitates to be encode an owner library/institution data element very efficiently. This process is specified by rules from ISO 28560-2.

„The data set for the ISIL code is 9 bytes long. As it requires locking, and the next data set is unlocked, it needs to be block-aligned. This is achieved by inserting the offset byte with the value 02_{HEX} and encoding two null bytes—value 00_{HEX}—following the data.“ [12]

An example of encoding is shown in the next picture.

Picture 2 – Example of encoding within RFID system.

Conclusion

In our period of globalization it is very important to create systems and standards on a world scale. The purpose of ISIL is a unique identification of libraries and related organizations. It solves a lot of problems connected with business in this area with a minimum impact on already existing systems. Of course, it still needs wider distribution, but it has the chances to be broadly used. Despite the criticism that it is insufficiently detailed, the ISIL has already proven itself as efficient standard, and nowadays it starts to build new systems and standards on its basis.
